

Aerohive and Barracuda - more powerful together

Connecting people wirelessly has become the norm today, with the use of multiple devices for business-critical and personal activities. Access to the Internet is vital for doing business. Having a solution that protects you from Internet content that detracts from your organization's goals and secures against dangers is essential. Setting limits on what Web content users are able to access can be essential for businesses involved in education, healthcare, high finance, or government work bound by regulatory requirements. Even small and family-run retailers must meet strict standards concerning credit card data.

Integrated solution enables matching the wireless edge and centralized policies

Aerohive and Barracuda partnership will provide you with:

- Enhanced, additional security and content filtering to wireless networks when using Aerohive.
- Extremely detailed and granular information along with controls to optimize users' application experience inside and outside network perimeters.
- Customization for how applications are prioritized, de-prioritized, or blocked based on all available context, including user identity, device type, location on the network, and time of day.
- Aggregated controls, as well as edge-based enforcement are available when you combine the access layer policy enforcement with the centralized Barracuda Web Filter or NG Firewall.

How does your organization benefit from the partnership?

- **Enhanced user-identity awareness and Enforcement** – Aerohive devices can provide user identity, device type, and IP address information to the Barracuda Web Filters and NG Firewalls. This enhances the UserID functionality that allows Barracuda to create security policies in order to make policy decisions based on context.
- **Client-less Operation** – Aerohive's and Barracuda's interactive communication provides seamless, enhanced security to connected clients and the Aerohive devices. All inbound and outbound traffic is forwarded to the Barracuda device without the need to install client profiles or agents.
- **Zero-Cost Data Performance** – Barracuda gathers information from Aerohive devices as part of normal authentication. There is no in-line performance hit for using this integration to enhance application control on the network.
- **Comprehensive Application Visibility and Control** – Together, Aerohive and Barracuda allow administrators to enforce application controls at both the edge of the network and at the gateway, ensuring applications are identified and prioritized/de-prioritized/blocked based on context at the ideal enforcement point.
